Discr nions

Concept

What are discriminated unions?

AND-Type (Product)

- A value contains ALL fields simultaneously
- The set of possible values is the *product* of all field possibilities
- `class`, `struct`, `record` in C#

OR-Type (Sum)

- A value contains EXACTLY ONE of the possible cases at any time
- The set of possible values is the *sum* of all case possibilities
- `enum`, `discriminated unions` in C#
